

CELLULAR BEAM PROFESSIONAL

Engineering Calculation Report - Draft / For Review

Project	Demo benchmark project
Report number	CBP-P15-001
Revision	Phase 15.0
Calculation engine	Phase 1-14 calculation snapshot
Status	DRAFT - FOR ENGINEER REVIEW

Executive Summary

This report records available calculation modules and their limitations. It does not certify a structural design or construction suitability.

Module	Evidence	Status
Units & section properties	SI canonical quantities and I-section benchmarks	Verified foundation
Straight / continuous beam	Linear elastic FEM, reactions and diagrams	Analysis action
Cellular openings / web posts	Action extraction only	No resistance check
Weld / stiffener	Demand and review schedules	No capacity check
Arch / composite / optimization	Elastic reference and candidate ranking	Screening only

Warnings and Limitations

No standard-based strength, buckling, Vierendeel, web-post, weld, stiffener, connector, composite, or arch capacity conclusion is stated unless a governing standard, edition, clause, and applicability model are selected and verified.

Professional Responsibility

This document is prepared by calculation-support software. Results must be checked and certified by a legally licensed engineer before use for construction.
